Education

Cornell Tech, Cornell University

New York, NY

MEng in Computer Science

May 2027

Courses: Optimization Methods, NLP, Machine Learning, Linear Algebra, Statistics & Probability

Attended Amazon University Event -- Tech Info Session Sept 2026

California State University, Sacramento

Sacramento, CA

B.S., Computer Science

May 2025

Minors: Applied Mathematics, Honors Global Engagement and Leadership

Courses: Software Engineering, Cybersecurity, OS, Software Testing, Data Visualization, DBMS, Computer Networking, Computer Architecture, and Systems Programming Unix

Clubs: Association for Computing Machinery (ACM Secretary), Women in Stem (Social Media Coordinator), Cybersecurity Club (PR Officer), MESA, Girls Who Code, and Society of Women Engineers

Awards/Activities: Edward W. Ermet Scholarship, Dean's Honor Roll, General Education Honors Program, Study Abroad Service (Irish Heritage School, Ireland)

Technical Skills

Languages: Java, Python, Javascript, React.js, Typescript, NextJS, SQL, C, Assembly, Go

Tools: AWS, Postman, Wireshark, Nettools, Kali Linux, Ubuntu, SentinelOne, Darktrace, Tableau, Git, MS Azure, MS Visio, Jira, Visual Studio Code, MySQL, Eclipse, MobaXterm, Figma, Jest, SAP S/4 HANA, PowerBI, Vercel

Experience

IT Technician - Murphy Austin Adams Schoenfeld LLP

March 2025 – June 2025

- Provided Tier 1–2 technical support for 50+ attorneys, partners, and staff, resolving issues related to login credentials, AD, printers, file access, and document workflows.
- Researched and evaluated imaging solutions (SCCM & third-party vendors), providing recommendations to standardize laptop provisioning and reduce setup time.
- Reviewed security reports and threat intelligence from Arctic Wolf's Managed Detection Response (MDR) platform to identify trends, escalate potential threats, and support improvements to the company's security posture.

Cybersecurity IT Intern - Pacific Coast Companies Inc.

June 2024 – Dec. 2024

- Identified advanced threats and leveraged industry-leading network detection tools in collaboration with MSPs to protect critical plant sites, participate in investigations, and remediate malware using a SIEM with EDR to reduce average incident response time.
- Operationalized different security tools (**PAM, Zero Trust**) with multiple vendor meetings and transitioned to modern technology stacks, resulting in a reduction in system vulnerabilities.
- Prototyped and researched two proof-of-concepts for out-of-band communication and emergency response for multiple subsidiaries while presenting to executives.

Elevate to Innovate Program - Accenture

June 2023 – July 2023

- Implemented AI-driven solutions to real-world challenges in collaboration with externs, fostering professional growth through mentorship and networking with industry leaders.
- Utilized AWS with photogrammetry and AI-driven technologies to enhance data processing, automation, and scalability, driving innovative solutions.
- Participated in Accenture's collaborative work culture, gaining firsthand exposure to leadership strategies, client-driven solutions, and cross-functional teamwork in a fast-paced consulting environment.

Notable Project Experience

Rapid Deployment Kit (Network Device) - Pacific Coast Companies Inc.

- Streamlined the process of building and developing the implementation of a rapid deployment kit (RDK) to deploy networks to new sites, reducing wait times from months to days for internet connectivity, and providing temporary networks.
- Played a key role in a real-world emergency when a company site lost its entire network due to a fire; the team deployed the RDK, restoring full connectivity in 14 days, minimizing downtime and operational disruption.

Cybersecurity Home Lab

- Built a virtual home lab (VirtualBox, Kali, Windows, Ubuntu, AD, PowerShell) for advanced malware analysis, threat intelligence, and penetration testing).
- Leveraged industry-standard tools (Wireshark, Metasploit, Splunk, VirusTotal) for network scanning, privilege escalation, and exploit testing while conducting malware sandboxing vulnerabilities on servers to strengthen security defense.

Camel Services - Wynco Services

- Collaborated with a team to develop a Dashboard application with role-based access management for a client overseeing multiple business sectors, including HVAC, plumbing, and construction.
- Developed real-time monitoring of project statuses and financial metrics, facilitating informed decision-making and operational optimization for the client's diverse business operations.
